Warning Messages

The V3 controller has a number of warning message for when something goes wrong in your system, these are designed to help in any trouble shooting.

Pressure in your system is too high. The pump pressure switch has activated (OR there is a break in wiring to the pump).

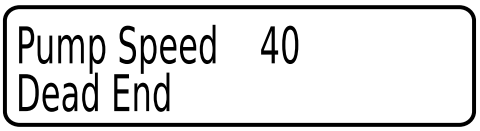

OR

There is a blockage in the hose line, water flow is being prevented (OR the 'Dead End' value has been set too low).

OR

If battery voltage falls below 11.0V the controller will warn the user.

Below 10.5V pump is disabled to prevent battery damage (If 'Battery Shutdown' is set to 'On', see Settings for details).

The following message during a fill suggests that the mains water has been disconnected.

An error has occured while using AutoCal. The pump is not connected or the enter button has been pressed to cancel it.

The following message indicates that the pressure sensor has been disconnected or has failed.

The pressure has dropped below the value set in Pressure Threshold, indicating a blocked carbon or sediment filter.

The following message is displayed when the amount of water that has flowed goes over the Total Flow Threshold. Check the RO membrane.
